FloodLAMP Biotechnologies

A Public Benefit Corporation

FloodLAMP Pooled Swab Collection Kit

For use with the FloodLAMP Mobile App

For research and surveillance use only. Not for diagnostic use.

Collection overview

FloodLAMP supports pooled testing of multiple people at the same time (up to 4 swabs per tube).

Each collection will have a **Sponsor** who is responsible for overseeing the collection process and returning their pool's samples. Sponsors need to use the FloodLAMP mobile app to complete the collection process by scanning the tube and listing the names of everyone submitting samples to the pool.

** Note: During the collection, maintain a safe distance from others if they are not in your household.*

Getting started

Follow your program administrator's registration instructions. You may be instructed to register online, including entering an access code.

Access your FloodLAMP account

After registration, look for a welcome text or email from FloodLAMP Biotechnologies. You may need to check your spam folder. Follow the link in the email or text to set your password, then download the app.

Confirm your profile information

Upon logging into the FloodLAMP app for the first time, you may be prompted to sign a consent. Please read this carefully and sign. After providing consent, confirm the personal information in your profile screen, available in the upper right of the home screen.

Add minors

If you have minors who will be submitting samples, add them to your profile. Minors who have been added to your profile will appear under your name when you search for participants.

Instructions

1

Begin collection

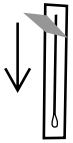
Sponsors: Tap the "Collect" button from the app home screen. Follow the instructions in the "Collect your samples" screen, which are listed here below.

Participants: Follow the swabbing instructions listed here in coordination with your group's sponsor.

2

Sanitize

Everyone submitting samples should wash and dry their hands before collecting their sample, or use hand sanitizer.



3

Open swab packs

Sponsors: Distribute swabs to each participant who will be adding samples to the tube.

** Note: Children under 4 should be swabbed by an adult.*

Each participant should open their swab pack when instructed by the Sponsor. Be sure to only touch the swab handle, not the soft tip of the swab. Do not let the swab touch anything.

4

Swab each nostril

Gently insert the entire soft tip of the swab into one nostril, and rub the swab slowly in a circular motion around the inside wall of your nostril four times. The swab tip should be touching the inside wall of the nostril through each rotation. Repeat the same process with the same swab on the other nostril.

5

Put swabs in tube

Each participant should snap off the end of the swab at the break point without touching the absorbent end with their hands.

Drop the shortened swab into the barcoded tube.

6

Cap tube

Sponsors: Once each participant has added their swab, securely tighten the cap onto the tube. Tap "Next" at the bottom of the "Collect your samples" screen.

7

Scan tube

Sponsors: On the "Scan" screen, capture the code on the side of the collection tube. Tap "Next" to continue.

8

Add participants

Sponsors: On the "Add Participants" screen, add the names of everyone adding samples to the pool by searching for their names or FloodLAMP registered email addresses. You can add up to 4 swabs in each tube. Participating minors will be registered under their guardian's account.

If you have trouble locating a participant in the system, add their name in the "Collection Notes" field and make sure they sign a consent form.

9

Put the tube in the biohazard bag

Securely close the zippered bag, then thoroughly wash or sanitize your hands.

10

Return the biohazard bag

Bring your biohazard bag to the collection point designated by your program administrator.
