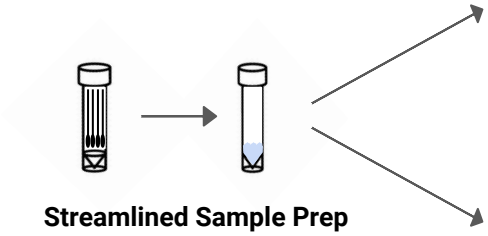
FloodLAMP Biotechnologies

Unlocking mass screening for infectious disease

FloodLAMP is a public benefit corporation advancing public health with low cost, open-source, widely accessible molecular testing. We have developed key innovations in testing program administration, the underlying tests themselves, and the test supply chain. FloodLAMP's flagship test is an isothermal, colorimetric, direct LAMP assay. FloodLAMP has reimagined molecular amplification workflows by pairing our tests with a purpose-built digital solution to streamline sample collection, accession and reporting. FloodLAMP provides a low overhead path for labs to enter the COVID-19 mass screening market today, and is a platform that enables expansion to other targets in the future.

Tests

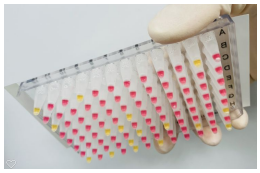


Streamlined Sample Prep

- Direct extraction-free assay
- Individual and pooled swabs
- Highly scalable, integrated processing
- Same sample for both tests

QuickColor™ COVID-19 Test

- High sensitivity (90%)
- 100% specificity
- 12 copies/µL LoD
- Ideal for serial screening
- Uniquely scales without capital intensive instruments



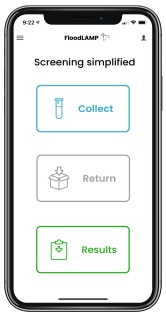
Visual Readout

EasyPCR™ COVID-19 Test

- Very high sensitivity (98%)
- 100% specificity
- 3 copies/µL LoD
- Ideal for diagnostics/reflex/confirm

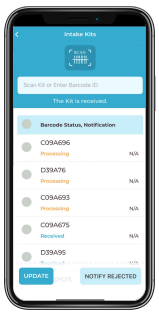
Standard RT-qPCR instrument

Digital Tools



Easy, smooth UI for participants

- Easy, shareable sign up
- Electronic consent
- Anywhere pooled collection
- Results notifications and reporting



Powerful, lightweight tool for the lab

- Rapid QR code scanning
- Pre-accessioned, pre-pooled sample tubes
- Batch flow control
- Optimized for confirming negatives in screening (can replace LIS)
- Can interface w LIS thru API

Validation

Validation kits

- Kits and guide available upon request

Clinical evaluation

- Performed by Stanford University CLIA lab
- 100% specificity for both tests (no FP)
- Praise for "really straightforward" protocol

Regulatory status

- Full EUAs for QuickColor™ and EasyPCR™ COVID-19 Tests submitted to FDA
- FloodLAMP Pooled Swab Home Collection Kit DTC pre-EUA submitted to FDA
- IRB approved for clinical studies

Tests have not been cleared, approved, or authorized by the FDA.
